Step by Step Guide to Add BUSD/FLUX liquidity on PancakeSwap

Before following this guide, make sure you have enough BUSD and FLUX to provide liquidity. You will also need a small amount of WBNB (around 0.001 should be enough). Any amount of FLUX/BUSD can be provided, as long as the ratio follows the current price (0.103$ at the moment of writing). So, for instance, if you wish to add 100FLUX, you need to have 10.3BUSD on your wallet.

For this guide I will be using Metamask, but you can use any Pancakeswap compatible wallet to do it, although some steps look a bit different
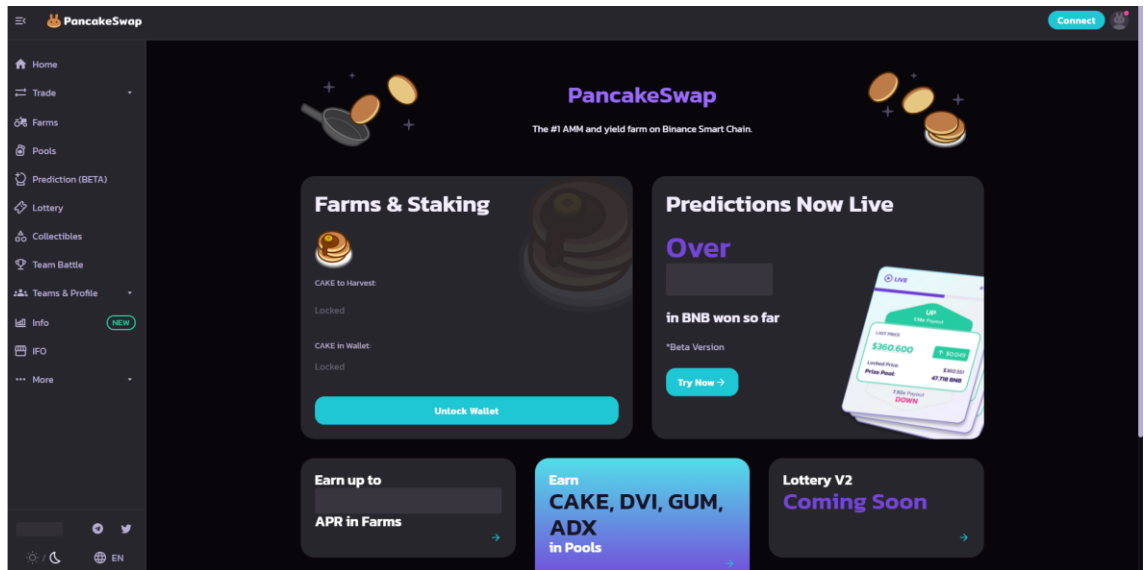

Make sure you have the correct tokens:

BUSD - 0xe9e7cea3dedca5984780bafc599bd69add087d56

FLUX - 0xaff9084f2374585879e8b434c399e29e80cce635

WBNB -0xbb4cdb9cbd36b01bd1cbaebf2de08d9173bc095c
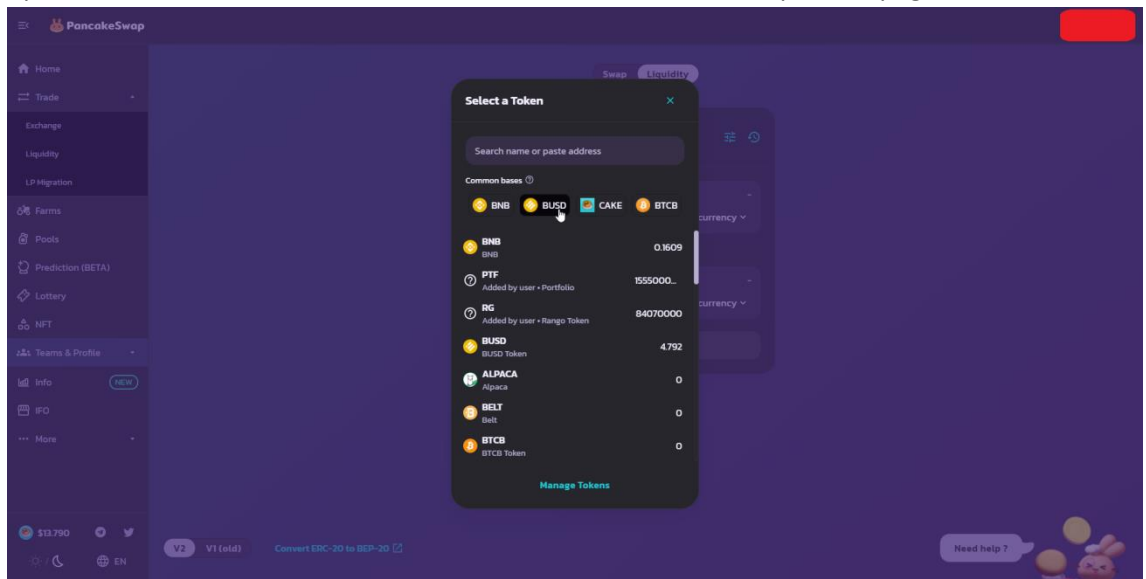

Here we go:

1. The first step to take is to visit https://pancakeswap.finance/

2. Next you click on the "Connect" button and choose your wallet (in this case, Metamask)

3. Then open the "Liquidity" tab, located on the left menu, and press "+ Add Liquidity"
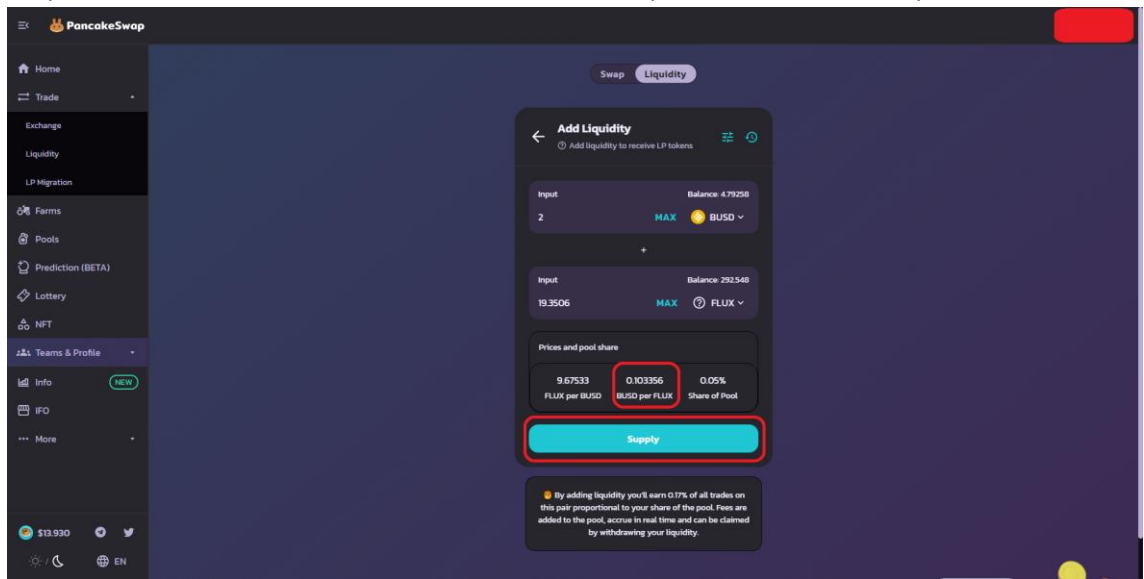

4. Select the first currency (can be either BUSD or FLUX). If any of the two doesn't show up on the token list, insert the contract addresses listed at the top of the page

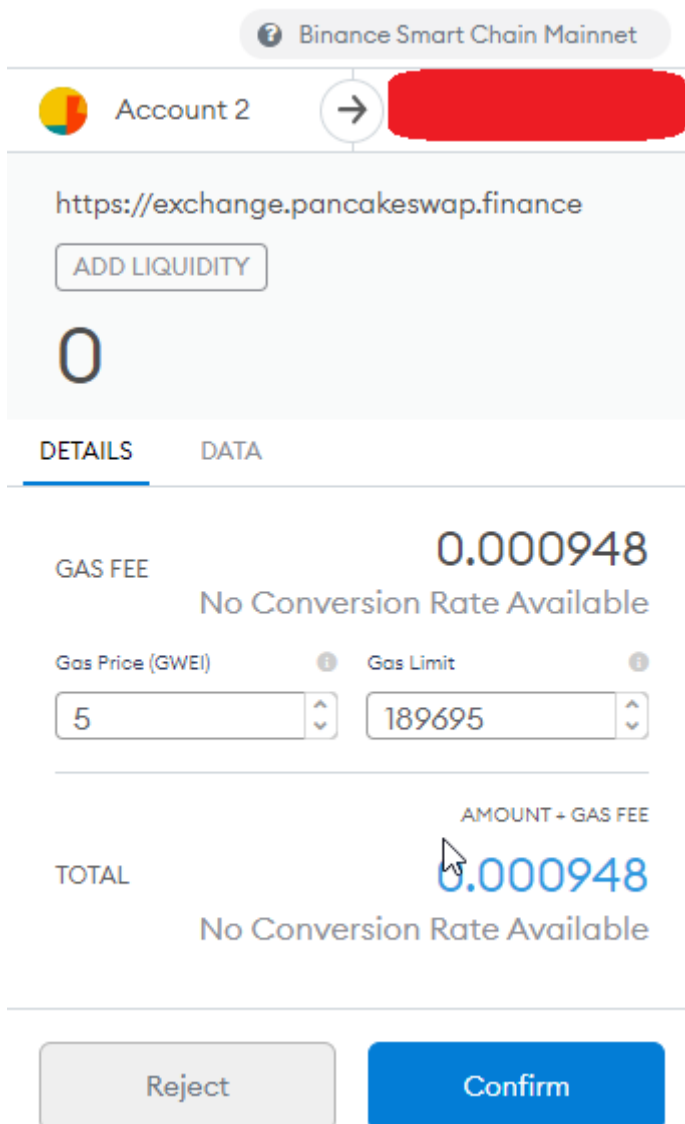

5. Do the same for the second currency

6. Now select the amount off BUSD/FLUX tokens to add and hit the button "Supply". You only need to fill one of the 2, since the ratio will be dependent on the token price

7. You then need to confirm the transaction

8. And that's it, you should get a message confirming your added liquidity and your share of the pool. You will now be rewarded with a small percentage of this pair trading fees. Enjoy!
